# UFOS

## THE PARADOX OF OPTICAL SILENCE

Ufology faces an unsolvable contradiction: we live in a digital panopticon of five billion high-definition cameras—yet extraterrestrial evidence remains blurry and anecdotal.

This book frames the discrepancy not as a cover-up, but as proof of the phenomenon's non-physical nature.

Flying saucers are not machines from elsewhere—they are technological archetypes of our own culture. A

sophisticated modern myth evolving in sync with our science fiction.

## **Sample – Chapter 1: THE SILENCE OF THE CAMERAS**

Every second, millions of people raise their phones to capture a moment, from the most trivial to the most extraordinary. An event no longer needs a news crew to be recorded; it is captured in real time by a single person.

Today, there are more than five billion mobile phones in people's hands, each equipped with a high-resolution camera capable of recording video and transmitting it instantly. At the same time, nearly five billion air trips are made every year. Millions of flights

with millions of passengers who, above the clouds, have the ability to observe and record the sky.

Given this reality, an unavoidable question arises: if the skies contained physical craft of non-human origin, with recurring presence, where is the irrefutable proof?

We are not talking about distant lights, blurry dots, or shaky images that require an “expert’s” interpretation to make sense. We are talking about a single clear image. A single stable, high-definition video that leaves no room for doubt. In a world full of cameras, the absence of this single piece of evidence is not a minor detail; it is one more factor that adds to the

non-physical existence of the UFO  
phenomenon.
